

Case Series/Study:

1. Statement of Clinical Problem: Clearly articulated/described? Are relevant clinical data included (age, gender, primary related diagnosis and relevant co-morbidities)?
2. Description of Past Management: Is the duration of the clinical problem stated? Are past management approaches and patient responses described?
3. Current Clinical Approach: Are the management plan and any changes made to it described along with rationale?
4. Patient Outcomes: Is the patient response described, including time frame for response, objective and subjective data?
5. Conclusions: Are clinical implications identified along with limitations? Has the author limited conclusions to this case only, without generalization to general population?
6. Clarity/Visually appealing? Displays well, ideas clearly communicated.

Clinical Research:

1. Purpose: Is the purpose/objective clearly stated?
2. Methodology / Clarity: Are the methods described, appropriate and clearly stated?
3. Statistics: Appropriate statistical methods been used.
4. Results / Conclusion: Are the results and conclusion presented in sufficient detail to address the research questions or aim?
5. Clarity/Visually appealing? Displays well, ideas clearly communicated.

Practice Innovations:

1. Purpose: Is the purpose clearly stated? Is a description included that identifies the need for the practice innovation?
2. Methodology / Clarity: Are the methods described, appropriate and clearly stated?
3. Outcomes: Are the outcomes included that relate to the problem and objective(s)? Key measures or indicators are used to evaluate the outcomes described.
4. Clarity/Visually appealing? Displays well, ideas clearly communicated.
